LANGUAGES

Bulgarian · English · German · Russian · Spanish

INTERESTS

- Digitalisation of planning and construction
- Digital platforms and data-driven workflows
- Automation
- AI
- Sustainable construction

SKILLS

Digital solutions
Translating project and business needs into data models, workflows and digital tools; digitalisation strategy

Platform development
Data models, user roles and permissions, web platforms from database to interface (JavaScript, React JS, MongoDB, Firebase)

Engineering and construction processes
Planning and execution of large projects; complex geometry, parametric design, thermal simulation, automation of office and construction processes

AI-assisted development
Building and shipping software with AI coding agents, from the Nap Nap Hooray sleep app to my portfolio website

Collaboration
Working across disciplines and with stakeholders, leading teams, coordinating complex processes

PROFILE

Digital Engineer and architectural designer with over a decade of coding experience, now Associate and Head of Digital Technologies at knippershelbig in Stuttgart. I work at the interface between engineering teams and software: understanding how projects are planned and built, translating that into data models, workflows and automated processes, and developing digital solutions for the office and for construction on large-scale international projects.

Alongside this I have designed and built web platforms from the data model to the user interface, including role-based access and testing in the browser. Years of leading interdisciplinary teams in research, teaching and practice have taught me to listen closely to different disciplines and turn their needs into clear, workable solutions.

PROFESSIONAL EXPERIENCE

2023 – current

Associate, Head of Digital Technologies

knippershelbig, Stuttgart

- Developing engineering solutions with code: automating construction processes, simulating thermal performance and exploring new applications for materials.
- Computational design and engineering on large international projects: Dubai Square Mall and Al Maktoum International Airport in Dubai, and double-curved canopies for the Projekt-Campus in Bad Friedrichshall and for a confidential client, the second-largest private yacht in the world.
- Developing strategies for the digitalisation of the office.
- Principal investigator of Frameless Glass Structures, a glass pavilion shown at Glasstec 2024 in Düsseldorf.
- Built kh ReUse, a web platform for cataloguing and reusing building elements salvaged from demolished buildings.

2021 – 2023

Deputy Department Chair for Architecture and Industrial Design

Swinburne University of Technology, Melbourne

- Supported the Department Chair in overseeing six disciplines and over 30 academic staff in the School of Design and Architecture.
- Coordinated marketing events, time-tabling and School meetings; a key role in the accreditation of the Master of Architecture and Urban Design.

2020 – 2021

Exhibition Director

Swinburne University of Technology, Melbourne

- Directed GradX, the end-of-year graduation exhibition for Architecture and Industrial Design.
- Reinvented the exhibition online during COVID-19: more than twenty 3D virtual spaces showing the work of nearly 400 graduating students from 18 disciplines.
- 2.2 K visitors from all over the world; Dean's Award for Innovation.

2019 – 2023

Lecturer in Architecture

Swinburne University of Technology, Melbourne

- 50 % teaching, 30 % research, 20 % leadership and service.
- Shaped the newly established bachelor's and master's programs, convening subjects in computational design, robotic fabrication and materiality.
- Co-supervised two PhD students.

2016 – 2019

PhD researcher

Gramazio Kohler Research, ETH Zurich

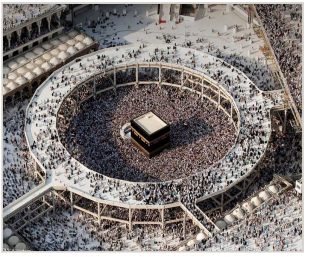

- Developed computational design and robotic fabrication tools for aggregating textile string and crushed stone into load-bearing, reusable structures with minimal material waste.
- Investigated their load-bearing capacity, and used fibre-optic sensors to measure their structural health.
- Shown at Ars Electronica 2017 and as the Rock Print Pavilion in Winterthur, 2018.

2014 – 2016

Digital Designer

SL Rasch GmbH Special & Lightweight Structures, Stuttgart

- Designed for the model-making department: large-scale, moving and adjustable models for public display of some of the company's largest projects, among them the Makkah Royal Clock Tower.

2013 – 2014

Junior architectural designer

Architectural Office Prof. W. Kergaßner, Stuttgart

- Contributed to the execution phase of the ZF Forum, a 92 million euro, 35,000 m² corporate headquarters.
- Led the design competition for a 250 m speed-testing tower for ThyssenKrupp; second place.

2011 – 2013

Trainee

Knippers Helbig Advanced Engineering, Stuttgart

- Planning and execution for art installations, a museum, an airport, high-rise buildings and bridges in Germany, Finland, Italy, Dubai, Abu Dhabi, the USA and China.

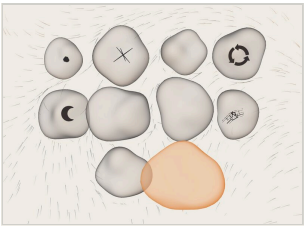

EDUCATION

2023 – 2025

JavaScript Developer Degree

SoftUni, online qualification

- Full-stack web development: JavaScript, React JS and AngularJS, MongoDB, Three.js and responsive web design.
- Final project: kh ReUse. The same knowledge built the portfolio website Flux and Flow.

2016 – 2020

Doctor of Sciences

ETH Zurich, Swiss Federal Institute of Technology

- Thesis: *Material- and Fabrication-informed Design of Structurally-sound Jammed Architectural Structures*.
- Supervised by Prof. Fabio Gramazio and Prof. Matthias Kohler, Chair of Architecture and Digital Fabrication; co-supervised by Dr. Ammar Mirjan and Dr. Romana Rust.
- The research built at full scale: the Rock Print Pavilion.

2014 – 2015

Master in Integrative Technologies and Architectural Design Research (ITECH)

University of Stuttgart

- Thesis: *Emergent Space: Simulations and Analyses of Spatial Aggregate Formations*, on the structural behaviour and architectural potential of aggregates, through physical prototypes and material simulations.
- Supervised by Prof. Achim Menges (ICD) and Prof. Jan Knippers (ITKE).

2009 – 2013

Bachelor in Architecture and Urban Planning

University of Stuttgart

- Thesis: *Development of Connections and Structural Reinforcement for Fiber Composites Using Computational Design Methods*, a tool to simulate glass- and carbon-fibre composites and optimise their material for the ICD/ITKE Research Pavilion 2013/14.

TEACHING AND SUPERVISION

2020 – 2022	**Arch Communication 2**, core subject, bachelor · Swinburne, coordinator and tutor
2020 – 2022	**Fabrication and Creative Processes**, core subject, master · Swinburne, coordinator and tutor
2020 – 2022	**earth for Earth!**, design research studio, master · Swinburne, coordinator and tutor
2021	**Up in the Air**, design research studio, master · Swinburne, coordinator and tutor
2020	**Construction 2**, design studio · Swinburne, co-coordinator and tutor
2018	**Master thesis**, Dept. of Civil Engineering · ETH Zurich, co-supervisor
2017	**Master of Advanced Studies in Architecture and Digital Fabrication** · ETH Zurich, tutor

PhD co-supervision, Swinburne: *Programming a material system for resilient architecture* (School of Design and Architecture, from 2022) and *Development of reusable mould system for the fabrication of concrete shells* (School of Engineering, from 2021).

SELECTED PROJECTS AND EXHIBITIONS

2024	Frameless Glass Structures, Glasstec, Düsseldorf · principal investigator
2022	**Hortiscape: a robotically crafted living wall**, CAADRIA, Sydney · research and project lead
2022	**Future Gardens**, student exhibition, Melbourne · convenor and tutor
2018	Rock Print Pavilion, "Hello, Robot", Winterthur · research and project lead

2017	**Rock Print: A Manistone**, Ars Electronica Festival, Linz · research and project lead
2015	**ICD Aggregate Pavilion 2015**, Stuttgart · research assistant
2014	**ICD/ITKE Research Pavilion 2013/14**, Stuttgart · "System and Development" team

GRANTS, AWARDS AND TALKS

2023	**Invited talk**, Shapeshift Festival, a festival for technology, science and contemporary culture, Sofia
2022	**Grant, AUD 42,199**, flat-pack DIY garden sheds and backyard offices for AKD Softwood Pty Ltd · research lead and grant holder
2022	**Adobe Innovation Grant, AUD 5,000**, accessible robotics through digital and physical prototyping · research lead and grant holder
2022	**Conference panel chair**, CAADRIA 2022, Session 7B Robotics and Digital Fabrication in Construction
2021	**UA-DAAD grant, AUD 10,000**, textile-reinforced granular materials in architecture (Australia-Germany Joint Research Cooperation) · research lead and grant holder
2021	**Mention in *The Economist***, "Knitting a road with stones and string": Empa built on the doctoral research for road building
2021	**Invited talk**, Melbourne University, ADD+F Research Hub
2021	**Workshop host**, robotic fabrication with COMPAS FAB, with Gramazio Kohler Research, ETH Zurich
2020	**Dean's Award for Innovation**, reinvention of GradX 2020, Swinburne
2020	**Invited talk**, "Fragile Matter in Architecture", Swinburne Design Lecture Series
2017	**Ars Electronica STARTS Prize**, Grand Prize – Innovative Collaboration
2017	**Invited talk**, "Young Successful Researchers", ETH Zurich, one of three PhD researchers selected
